CONNECTED SERVICES | TOYOTA

2021 RAV4 PRIME

QUICK REFERENCE GUIDE SUPPLEMENT

RAV4 Prime vehicles equipped with Remote Connect offer unique and exclusive features.

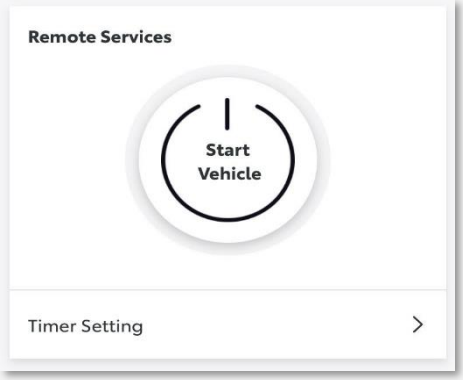

1. Remote Climate Start
2. Charge Management
3. Charging Station Map

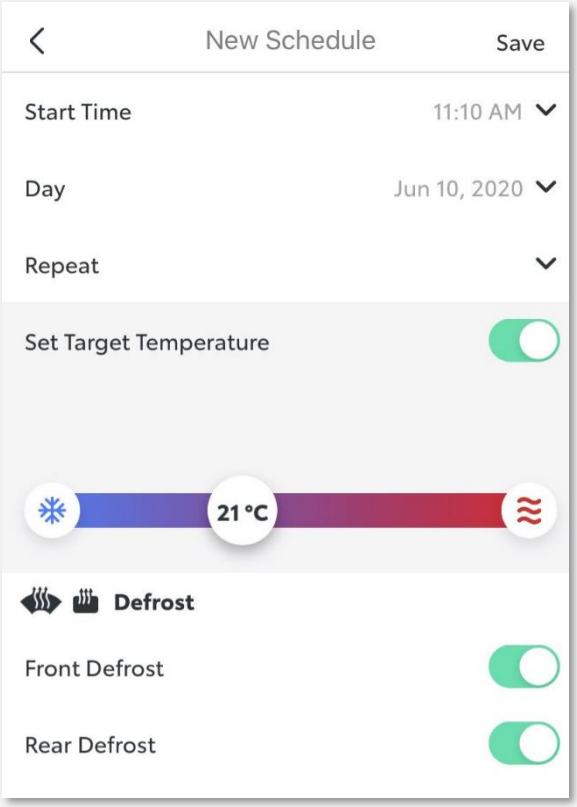

1. Remote Climate Start

- Easily set your preferred climate to heat or cool your cabin and activate front and rear defrosters.
- Simplify your daily routine by creating a Remote Climate Start schedule. For example, you can schedule a Remote Climate Start every weekday morning before your commute.
- Benefit: the cycle time is 20 minutes and uses the vehicle's hybrid battery, not the engine, so your vehicle will not idle.

***NOTE:** This feature can be used if the vehicle is plugged in, or if the hybrid battery charge level is above 10%.**

***See Owner's manual for full details and limitations.**

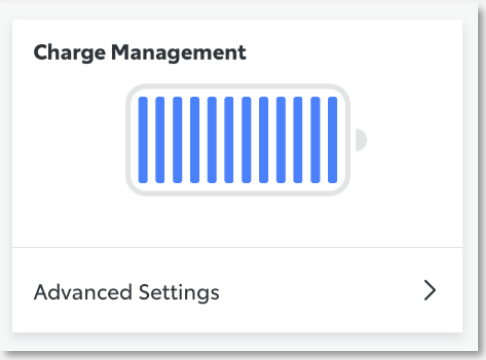

PLUS: All 2021 RAV4 Prime Models can also use the A/C button on the key fob to start the climate control. The cabin will be heated or cooled to the temperature it was set to when the vehicle was turned off.

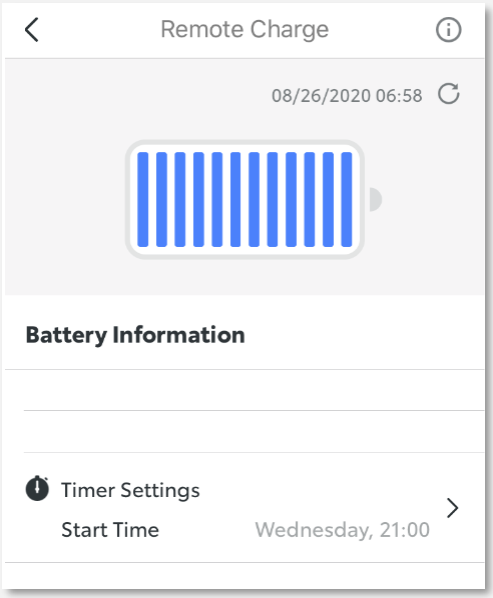

Version 1 – August 2020

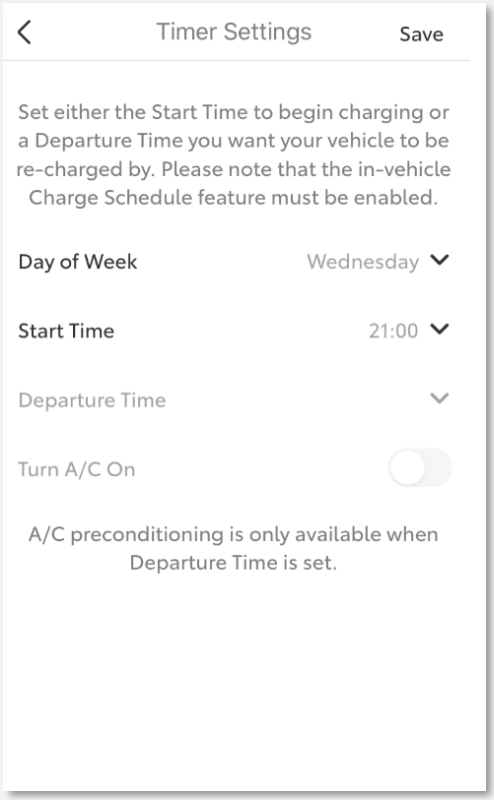

2. Charge Management

- **The Toyota App displays the remaining battery level.**
- **Using the vehicle's Multi-Information Display (MID), the audio display or the Toyota App, you can set a charging schedule and take advantage of off-peak electricity savings in your area.**

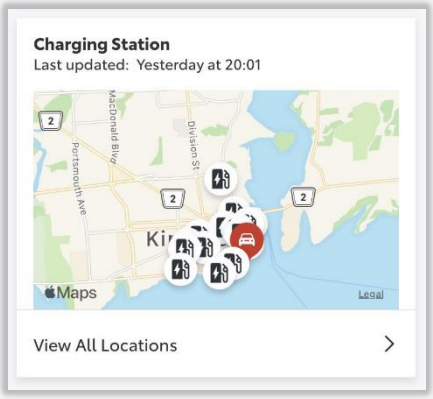

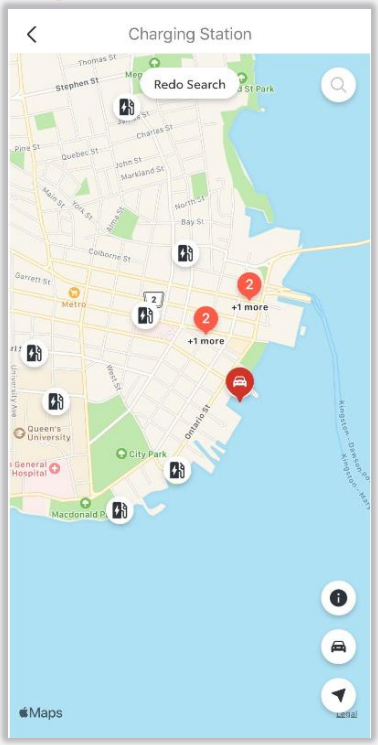

***NOTE:** Before editing your charging schedule in the Toyota App, you will need to create one using the MID or audio display. For instructions on how to do this, refer to your Owners Manual.*

3. Charging Station Map

- **Search for stations by area, city, landmark, address etc.**
- **Access valuable information* such as:**
  - **Contact information**
  - **Schedule of operation**
  - **Number of chargers**

****Information available relies on the operator of each station. A limited number of stations will be displayed in a single search.***

Version 1 – August 2020
